

Typhoon Chanthu

Location: West Pacific

Impact: Property and marine exposure

Issued by Skytek: at 12:00 GMT on September 8th, 2021

SUMMARY

Chanthu has rapidly increased with sustained winds of 155mph from a tropical depression 36 hrs ago to becoming the second Super-Typhoon of the season. A Category 5 Super-Typhoon, Chanthu is forecast to braze the South of Taiwan with winds of 140mph, still a category 4 typhoon, before making landfall in Huanggang, China.

Chanthu is likely to be the strongest storm to hit Taiwan or mainland China since Typhoon In-fa in July, which worsened already severe flooding across China's southeast.

In total, the economic losses from the typhoon In-fa came to more than \$14 billion, according to Chinese state-run media.

Skytek closely monitors the aggregated exposure of marine hull in the cone of the typhoon and the windfarms and energy offshore assets on the west coast of Taiwan and the coast of China.
